About the Programs
In Missouri, the Department of Mental Health (DMH) is the state authority responsible for developing and implementing a statewide response addressing substance use disorders affecting Missouri families and communities. DMH provides intervention, treatment, and recovery support services through contracted community-based and faith-based service providers. DMH works closely with the Department of Social Services for the coordination of services for the state's Medicaid population and with the Department of Corrections for the coordination of services for the supervised offender population.

Authorization for Programs
RSMo 631.010 and 191.831 for substance use disorder treatment programs and RSMO 302.010, 302.304, 302.540, 577.001, 577.041, 577.049, and 631.010 for the substance abuse traffic offenders program.

Funding
Substance use disorder treatment programs are funded by about $42.6 million in state general revenue which generates an additional $87.0 million in matched federal funding including Medicaid and Substance Abuse Prevention and Treatment Block Grant.

Prevalence of Substance Use in Missouri
- **General Population**: Approximately 379,000 Missourians struggle with a substance use disorder. Of these, 17,500 are between the ages of 12 and 17 (SAMHSA, 2016).
- **Veterans Population**: Of the approximately 482,094 Missouri Veterans, an estimated 5.9 percent or 28,444 have a substance use disorder (Missouri Department of Public Safety, 2017; SAMHSA, 2016).
- **Pregnant Women**: Of the approximately 80,200 pregnancies in the state, about 7,800 are women who are struggling with an alcohol or drug problem (Missouri Department of Health & Senior Services, 2017; SAMHSA, 2018).

Number Served

Special Populations
Received treatment for a substance use disorder in FY 2018:

- 1,452 Pregnant women
- 2,670 Adolescents
- 2,027 Veterans
- 3,527 Homeless Missourians
- 11,403 Parents with dependent children
- 21,989 Individuals with a co-occurring mental illness (7,122 with a serious mental illness)
- 16,645 Medicaid enrollees, including 7,494 permanently and totally disabled
Evidence of Effectiveness

Medication Assisted Treatment

Medication Assisted Treatment (MAT) combines FDA-approved addiction medications with counseling. Addiction medications have been approved for the treatment of alcohol and opiate use disorders. Research shows that when treating substance use disorders, a combination of medication and behavioral therapies is most successful (SAMSHA, 2014). Missouri’s data shows that consumers receiving MAT have better retention in treatment compared to those in traditional treatment. In addition, those with MAT have comparable outcomes compared to those without MAT even though the MAT group tends to have greater problem severity (i.e. longer history of substance use, additional psychiatric issues, more recent substance use, unemployment, etc.)
DMH is collaborating with the Department of Corrections on a pilot study looking at the effectiveness of initiating the use of Vivitrol prior to release from the correctional facilities and continuing use in the community. Vivitrol blocks opiate receptors in the brain thereby eliminating the euphoric effects and preventing cravings for alcohol and opiate drugs such as heroin. It is administered in the form of a shot once per month. These individuals will receive follow-up medication and substance use counseling through DMH contracted community agencies. It is anticipated that these individuals will be less likely to relapse to alcohol or opiate use upon their release from prison, thereby reducing the likelihood of re-arrest and re-incarceration. The University of Missouri-St. Louis, Missouri Institute of Mental Health is conducting the evaluation of this project. Outcome data are collected on offenders for a period of two years after starting the program.

**Community-Based Treatment is Cheaper than Incarceration**

The potential cost savings from community-based substance use disorder treatment in lieu of incarceration has been recognized in several large-scale studies including the California Treatment Outcome Project and the National Treatment Improvement Evaluation Study (Ettner, S.L. & et al., 2006; SAMHSA, 1997). In Missouri, the average prison stay for an offender with a drug-related offense costed $21,903 in FY 2018 which is approximately $60.00 per day. The average length of engagement in community-based treatment is 116 days with an average cost of $2,371. Intervention fees collected from offenders help pay a portion of the cost for community corrections and intervention services for offenders under community supervision.

Treatment for Pregnant Women Increases Likelihood of Healthy Babies
According to the National Survey on Drug Use and Health, approximately 7.9 percent of pregnant women have an alcohol addiction problem, and 3.7 percent of pregnant women have an illicit drug problem (SAMHSA, 2015). Research has shown that pregnant women who need and receive substance use treatment are more likely to receive prenatal care; are more likely to reduce or abstain from alcohol, drugs, and tobacco use; and have better perinatal outcomes (Brady, T.M. & Ashley, O.S., 2005). Better outcomes are obtained for women who enter treatment early in their pregnancy. Lifetime cost of a child born with Fetal Alcohol Syndrome is estimated at $2 million (SAMHSA, 2012).

Drug Testing in the Opioid Programs
There is considerable research that shows that Opioid Treatment can reduce 1) illicit drug use, including injection drug use; 2) risk of overdose; 3) risky sexual behavior; 4) transmission of infectious diseases (i.e. HIV, hepatitis B or C, bacterial infections); and 5) criminal activity in addition to improving pregnancy outcomes (CDC, 2002). Most individuals in Missouri’s Opioid Treatment programs do not test positive for illicit drugs when subjected to random drug tests.
Treatment Recidivism

While relapse is a common characteristic of the addiction process, most DMH consumers do not cycle in and out of substance use treatment.

Transition from Detox to Treatment Increases Likelihood of Success

From SAMHSA’s Detoxification and Substance Abuse Training Manual:

- Detox patients are in a crisis.
- Research shows that detox is often followed by a reduction in drug use and a desire to seek treatment.
- Linkage from detox to treatment leads to an increase in recovery and a decrease in repeated detox and treatment services.
- Success at recovery depends on continuation of treatment after detox (SAMHSA, 2009).

School-Based Intervention

Missouri’s School-Based Prevention Program (SPIRIT Program) operates in four sites serving six school districts across the state. These districts serve large at-risk student populations based on standardized test scores, graduation rates, substance use prevalence, and juvenile justice referrals. SPIRIT’s program goals are to: 1) delay onset and decrease use of alcohol, tobacco and other drugs; 2) improve overall school performance, and 3) reduce incidents of violence, including bullying. Over a four year period (2015-2018), SPIRIT has been trending downward in cigarette and alcohol use.
Reducing Binge Drinking at Missouri Colleges

Binge drinking has been associated with 1) unintentional and intentional injuries, 2) alcohol poisoning, 3) sexually transmitted diseases, 4) unintended pregnancy, and 5) children born with Fetal Alcohol Spectrum Disorders (CDC, 2012). Funded in part by DMH, Partners in Prevention is a statewide coalition of 21 public and private universities whose mission is to create an environment that supports good decision making in regards to alcohol by the college students who attend the higher education institutions in Missouri. In recent years, the prevalence of binge drinking among Missouri college students has declined.
Community Prevention
Missouri has a network of over 160 community-based teams of volunteers that address prevention of alcohol, tobacco, and other drugs in their communities. Teams use a strategic process that includes: 1) needs assessment, 2) capacity building, 3) planning, 4) program implementation, and 5) evaluation. Teams collaborate with schools, businesses, law enforcement, and others to promote drug-free lifestyles.
