### Mobile Dental Services

In collaboration with the Missouri Coalition for Oral Health and support from the Missouri Developmental Disabilities Council, Enable Dental is implementing a pilot program for teledentistry to serve individuals with intellectual and developmental disabilities. Their dental team brings portable equipment and dental care into a patient's home, day hab or community. Services provided include x-rays, exams, cleanings, fillings, and extractions. While these services may be covered through Medicaid, there is bundle package pricing for preventive services and reduced treatment fee schedules. If interested in participating, a [consent form](#) will need to be completed and submitted. For additional information, please see the [program flyer](#). If a county served is not on the list, you may still reach out, as there is the potential to expand based on interest and need.
